

AMIT MISHRA

Senior Software Engineer | Java, Spring Boot & Microservices | Cloud & AI-Integrated Systems

Delhi, India | amymishra04@gmail.com | +91 6388465574 | linkedin.com/in/amit7275 | github.com/amit7275

KEY HIGHLIGHTS

- 8+ years of backend engineering across logistics, healthcare, and enterprise-integration domains (Dalmia Bharat, Optum, Infosys)
- Eliminated daily production downtime (previously 2–3 hours) since taking ownership of platform stability on Dalmia Bharat's core logistics platform
- Built MCP- and Spring AI-powered agent tooling directly into production Spring Boot services, extending LLM automation into core backend systems
- Supported decomposition of a monolithic enterprise platform into 7 microservices for DHL International

PROFESSIONAL SUMMARY

Senior Backend Engineer with 8+ years building scalable enterprise systems in Java, Spring Boot, microservices, and distributed architectures across logistics, transport, and enterprise-integration domains. Recent focus on cloud-native backend engineering on GCP/GKE and BigQuery, real-time SAP integration for enterprise billing, and embedding MCP-based and Spring AI-powered agent tooling directly into production Spring Boot services - extending LLM-driven automation into core backend systems rather than treating it as a separate layer. Comfortable owning designs end-to-end: from SQL/data modeling and API contracts through Kubernetes deployment, while partnering closely with product and business stakeholders to turn requirements into shipped features. Uses Claude Code, GitHub Copilot, Cursor AI, and Claude for AI-assisted coding, debugging, and faster delivery of production-ready systems.

CORE SKILLS

Backend Engineering: Java 8/11/17/21, Spring Boot, REST APIs, Microservices, OOP, Multithreading, Hibernate, JUnit, Mockito

Architecture & Design: System Design (HLD/LLD), Distributed Systems, Event-Driven Architecture, Scheduler Development, Resilience Patterns, Performance Optimization

Data & Messaging: MySQL, PostgreSQL, Oracle, BigQuery, Kafka, SQL, NoSQL, Firebase

Cloud & DevOps: GCP (GKE, Cloud Logging, GCS), AWS, Azure, Docker, Kubernetes, Jenkins, SonarQube, Git, GitLab, Bitbucket

AI & Automation: Spring AI, MCP (Model Context Protocol) tool development, AI agent tooling for production systems, Claude/LLM API integration, Claude Code, GitHub Copilot, Cursor AI, AI-assisted development, developer productivity engineering

Product & Collaboration: Requirement analysis, feature planning with PMs, technical solutioning, cross-functional stakeholder communication, delivery ownership

Engineering Practices: Code reviews, debugging, unit testing, mentoring, technical documentation

Methodologies: Agile, Waterfall, Technical Documentation

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Dalmia Bharat Group

Aug 2023 - Present

Vahakmitra Logistics Platform & TBPS Billing Microservice (SAP Integration)

- Architected a real-time SAP-to-BigQuery invoice reporting pipeline, replacing a lagged batch report and giving the business near-real-time billing visibility across all transport operations.
- Designed the end-to-end TBPS payment callback workflow governing the bill lifecycle from submission through success/failure states, with safe-retry handling and full status-history tracking, improving billing reliability.
- Built and unified a suite of vehicle-allocation features — Auto Tagging (empty & preloaded vehicles), Priority Slot, Bidding, and Ceiling Freight Rate — into one streamlined workflow, cutting manual dispatch effort; the Bidding feature

cut average freight costs by an estimated 10–15%, while Ceiling Freight Rate delivered 5–10% savings on route-wise freight costs.

- Eliminated daily production downtime, previously 2–3 hours, since taking ownership of platform stability.
- Built self-onboarding workflows for transporters, along with inbound shipment and logistics management functionality, reducing onboarding turnaround time.
- Built an Order Clubbing feature that groups orders into a single depot-to-plant shipment using configurable rules (weight, route, customer, location), reducing outbound shipment count by an estimated 15–20%.
- Built MCP-based and Spring AI-powered agent tools (e.g., `getSystemLoadStatus`, `getBidDetailsHistory`) inside the existing Spring Boot application, extending LLM-driven automation into production backend services.
- Designed a Delivery Optimization Algorithm in Java to group orders by location proximity, size, and transport capacity, reducing trip counts and transportation costs; also delivered the backend for a Leads Funnel Management microservice (Java, MySQL) and evaluated GCP Cloud Logging cost-reduction/APM options for GKE observability.

Software Engineer - Optum Global Solutions

Jun 2022 - Aug 2023

VIS (Vital Information Standardization) & MCR DDTTool

- Implemented REST endpoints and background schedulers to automate support operations, reducing manual effort and improving team productivity.
- Managed and deployed Kubernetes pods across new use cases, applying Docker and Kubernetes for scalable, cloud-native service management.

Technology Analyst - Infosys

Dec 2019 - Jun 2022

Client: DHL International - Enterprise Logistics Platform

- Supported decomposition of a monolithic application into 7 loosely coupled Java microservices, improving modularity and deployment flexibility.
- Developed an XML template-based backend framework using Spring Boot and PostgreSQL over Oracle OTM, including template-driven data upload and customer onboarding validation workflows.

Software Engineer - Agicent Technologies

Feb 2018 - Oct 2019

- Performed end-to-end Android application development using Java, Android framework components, and REST API integrations, contributing to consumer apps including Wellcure and HASfit on the Google Play Store.

EDUCATION

Master of Computer Applications (MCA)

Galgotias College of Engineering and Technology, Greater Noida | 2016 - 2018
