

AMIT MISHRA

Senior Software Engineer | Java Backend, Cloud & AI-Integrated Systems

Delhi, India | amymishra04@gmail.com | +91 6388465574

PROFESSIONAL SUMMARY

Senior Backend Engineer with 8+ years building scalable enterprise systems in Java, Spring Boot, microservices, and distributed architectures across logistics, transport, and enterprise-integration domains. Recent focus on cloud-native backend engineering on GCP/GKE and BigQuery, real-time SAP integration for enterprise billing, and embedding MCP-based AI agent tooling directly into production Spring Boot services - extending LLM-driven automation into core backend systems rather than treating it as a separate layer. Comfortable owning designs end-to-end: from SQL/data modeling and API contracts through Kubernetes deployment, while partnering closely with product and business stakeholders to turn requirements into shipped features. Uses GitHub Copilot, Cursor AI, and Claude for AI-assisted coding, debugging, and faster delivery of production-ready systems.

CORE SKILLS

Backend Engineering: Java 8/11/17, Spring Boot, REST APIs, Microservices, OOP, Multithreading, Hibernate, JUnit, Mockito

Architecture & Design: System Design (HLD/LLD), Distributed Systems, Event-Driven Architecture, Scheduler Development, Resilience Patterns, Performance Optimization

Data & Messaging: MySQL, PostgreSQL, Oracle, BigQuery, Kafka, SQL, NoSQL, Firebase

Cloud & DevOps: GCP (GKE, Cloud Logging, GCS), AWS, Docker, Kubernetes, Jenkins, SonarQube, Git, GitLab, Bitbucket

AI & Automation: MCP (Model Context Protocol) tool development, AI agent tooling for production systems, Claude/LLM API integration, GitHub Copilot, Cursor AI, AI-assisted development, developer productivity engineering

Product & Collaboration: Requirement analysis, feature planning with PMs, technical solutioning, cross-functional stakeholder communication, delivery ownership

Engineering Practices: Code reviews, debugging, unit testing, mentoring, technical documentation

Methodologies: Agile, Waterfall, Technical Documentation

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Dalmia Bharat Group

Aug 2023 - Present

Vahakmitra Logistics Platform & TBPS Billing Microservice (SAP Integration)

- Architected a real-time SAP-to-BigQuery invoice reporting pipeline, replacing a lagged batch report and giving the business near-real-time billing visibility.
- Designed the TBPS payment callback workflow governing the bill lifecycle from submission through success and failure states, with safe-retry handling and full status-history tracking.
- Built Auto Tagging with Empty Vehicles and Auto Tagging with Preloaded Vehicles, automating load-to-vehicle allocation to cut manual dispatch effort, turnaround time, and transportation cost.
- Introduced a Bidding feature enabling transporters to compete on freight rates, driving down transportation costs.
- Launched a Ceiling Freight Rate portal to cap route-wise freight rates, unlocking further cost savings.
- Unified Auto Tagging, Priority Slot, and Bidding Slot into a single streamlined allocation workflow for smoother day-to-day operations.
- Improved application stability, cutting daily downtime from 2-3 hours to near-zero.
- Built self-onboarding workflows for transporters to onboard vehicles and drivers directly onto the platform.
- Developed inbound shipment and logistics management functionality.
- Built an Order Clubbing feature that groups orders into a single depot-to-plant shipment based on configurable rules (weight, route, customer, location), enabling one-go dispatch to save cost and time.

- Built MCP-based AI agent tools (e.g., `getSystemLoadStatus`, `getBidDetailsHistory`) inside the existing Vahakmitra Spring Boot application, extending LLM-driven automation into production backend services.
- Evaluated GCP Cloud Logging cost-reduction strategies and APM tooling options to improve production observability for GKE microservices.
- Designed a Delivery Optimization Algorithm in Java to group orders by location proximity, order size, and transport capacity, reducing trip counts and transportation costs.
- Developed the backend of a Leads Funnel Management microservice - lead creation, territory assignment, and stage/status workflows - using Java and MySQL.

Software Engineer - Optum Global Solutions

Jun 2022 - Aug 2023

VIS (Vital Information Standardization) & MCR DDTool

- Implemented REST endpoints and background schedulers to automate support operations, reducing manual effort and improving team productivity.
- Managed Kubernetes pods and supported deployment and scaling of services in containerized environments.
- Deployed new use cases on Kubernetes, applying Docker and Kubernetes for scalable, cloud-native service management.

Technology Analyst - Infosys

Dec 2019 - Jun 2022

Client: DHL International - Enterprise Logistics Platform

- Supported decomposition of a monolithic application into 7 loosely coupled Java microservices, improving modularity and deployment flexibility.
- Developed an XML template-based backend framework using Spring Boot and PostgreSQL over Oracle OTM.
- Built template-driven data upload functionality and customer onboarding validation workflows.

Software Engineer - Agicent Technologies

Feb 2018 - Oct 2019

- Performed end-to-end Android application development using Java, Android framework components, and REST API integrations.
- Contributed to delivery of consumer mobile applications including Wellcure and HASfit on the Google Play Store.

EDUCATION

Master of Computer Applications (MCA)

Galgotias College of Engineering and Technology, Greater Noida | 2016 - 2018
